

Sanyo 20EZ Pot Kit

VR355	50K	Volume
VR351	10K	Brightness
VR352	100K	Horizontal Centering
VR353	200K*	Vertical Hold
VR354	50K	Vertical Size

10K	VR351	Brightness
50K	VR354	Vertical Size
50K	VR355	Volume
100K	VR352	Horizontal Centering
200K*	VR353	Vertical Hold

Pots can be read by taking the first two numbers and adding the third number as the amount of zeros after it, e.g., 103 would be 10 with 3 zeros after it or 10,000 ohms which when shortened to the Greek abbreviation k for kilo which translates to 1,000, would be 10k ohms.

Hence, 201 would be 200 ohms & 202 would be 2000 or 2k, and this can be applied to any pots you may need to know the stated value of.

~~*Since the 200K pots are not available, 500K pots have been added to this kit & should work fine, but I would recommend they be put in one at a time after the board has been tested with the other replacements & known to be good, so that you can note any undesirable changes that may occur. Keeping the 200K pots may be necessary if you experience any problems.~~
